

### **SOP: Transportation of liquid helium vessel.**

*Only trained persons should transport vessels containing liquid helium.*

1. Use shoes which are covered properly by the trousers, or use shoes which easily may be removed. Use eye protection and gloves.
2. Push the container carefully through the corridors in order to avoid damage to the container.
3. If you have to use a lift between floors, put the container in the lift and walk up (down) the stairs. Be sure that nobody else uses the lift and put a poster with "Liquid nitrogen/helium. No entrance" on the container.
