

Evaluation of KJM 5250/9250: In lectures 7 and 8 this page was presented.

Next Wednesday Evaluation. Please think about:

How have you been received?

Quality and availability of information about course?

What is bad with the course?

What is good with the course – if any??

Other topics?

If you are afraid to report in open, print on a sheet of paper and slip under my door - Ø 320.

-----

FR said: do not like the delayed start of 5250/9250 since Module 1 in KJM-MENA 4010 is delayed 2 weeks because of Health and Safety Courses in January. Should have had 2 weeks lectures before practical nmr.

## Evaluation, in lectures 9 and 10 (half way).

- One student: FR sends too many e-mails with course content related topics. It is hard to know what is important for the exam and not.
- Another student: For me the best thing of the course is the possibility to become confident with the instruments and the software with a lot of freedom. On the other hand maybe it could be better to do some experiments less, to have more time to understand deeper everything. Because sometimes to finish everything some important thing was made in a hurry or without thinking too much. I know that NMR is a huge topic and I guess it is not easy to choose what yes and what no. About mails I think that is not the number the real problem, but maybe to underline when something is "highly important" since while attending the course students do not have enough knowledge to understand by themselves. And usually, or I can say about me, we are in the middle of a sea of things!
