

REAL Teaching

Linda T. Sørensen

The Faculty of Mathematics and Natural Sciences has great focus on education and quality which makes the group tutors a priority. We know that our tutors have a significant impact on the students and their learning processes.

Talk about it!

The purpose of this part is to meet other tutors and talk about your own experiences. You may use these questions as a starter for the conversation:

Think about your experience as a *student* in a tutor group.

- What did you like? Why?
- What did you not like? Why?
- Did the tutor group cover your individual subject needs?

If you have been a tutor before:

- What did you manage well?
- In what areas have you experienced personal development in this job?
- What have been the main challenges?
- How can you help new tutors in their job?

- What are the main challenges as a tutor? How do you get the students to come to class?

- What do you expect from the students?

«As you enter a classroom ask yourself this question: If there were no students in the room could I do what I am planning to do? If your answer is yes, don't do it»

Gen. Ruben Cubero, Dean of The Faculty, United States Air Force Academy
